Details of the Large Artificial Palm Trees

Have you ever dreamed of creating a tropical paradise at home? Or maybe you own a hotel or airport and simply wish to add a touch of the tropics without the headache and hassle of keeping a massive palm tree alive!

Make Your Tropical Dreams Come True

All our fake palm trees are handcrafted and designed to impress your friends, neighbors, guests, or visitors. These giant artificial plants are a major attraction if you want to make a statement or simply don't want to maintain a living palm tree anymore.

Designer Plants USA presents tall artificial palm trees designed with superior, lush, dense foliage, unlike anything you have ever seen. Our range of artificial palm trees is made using POLYTECH UV plastics and is designed to last outdoors or indoors.

Moreover, the UV plastic leaves on our fake palm trees are made to last for years. However, even if they ever need to be replaced, you can make do by replacing only the leaves and not the entire artificial palm tree, which will cost you only a

fraction of the overall cost.

The stunning fake palm tree is made with steel and fibreglass (mainly), along with high-quality paints designed to last outdoors for years to come.

Each tree comes with a metal base plate to ensure they can be securely affixed to the ground.

Things to Keep in Mind

Our impressive artificial palm trees are made to order, so there are a few requirements for placing orders (terms and conditions). We'd rather spell it out for you now, making it easy for you to make the right decision:

1. The Artificial Palm Trees **aren't in stock – we do not stock these items as they are made to order.**
2. Immediately upon placing online orders, the fake palm trees go into production (if you have special requirements, you should contact us **before placing an order**).
3. Delivery can take anywhere between 12 -16 weeks (this allows for delays by customs, shipping lines and other mandatory check-points).
4. Free delivery does not apply to these items. (You will be billed a fee for delivery)
5. As we place these trees into production immediately, there are no refunds for cancellations or delays.
6. Each tree will vary from the photos (exact colours do vary), along with minor changes per tree.

Installation

Make it easier for everyone by understanding what can and cannot be done by us here –

- The palm tree will need to be custom concreted or attached to the ground – we do not offer this service. However, we would recommend you speak with a builder/surveyor/engineer/concrete specialist.
- The tree will ordinarily come with a base metal plate which may be welded, or often you can insert large bolts through the metal base plate and attach it to an adequately built pad below.
- The leaves come separate from the tree (this provides greater protection and the ability to replace them should they be damaged). When you order the tree leaves will be supplied as shown above however comes disconnected.
- The foliage is fire tested and engineered to last. The trunks are fibreglass and have an internal metal pole.
